#### **PHOTOMETRICS**

Below is a typical photometric representation of the Zeta 10 fixture. Please download IES files to ensure exact photometric value.

#### **DMX REQUIREMENTS**

The Zeta 10 Tunable White fixture with DMX unit has **two channels** per fixture (1 to control intensity, 1 to control color). When placing an order, please indicate DMX address. (The DMX address will be listed on the back of the fixture). Do not connect more than 32 fixtures per DMX daisy chain.

| DMX Address |                           |                         |  |
|-------------|---------------------------|-------------------------|--|
| Fixture     | Intensity Control (ex. X) | Color Control (ex. X+1) |  |
| #1          | 1                         | 2                       |  |
| #2          | 3                         | 4                       |  |
| #3          | 5                         | 6                       |  |

The fixture can be connected with RJ45 or XLR sockets. DMX cables **are not** included; please refer to compatible DMX cabling list for more information. The final fixture on each daisy chain should be terminated by the use of a DMX terminator purchased from a 3rd party or from Meteor.

# **COMPATIBLE DMX CABLING LIST**

DMX uses a cable consisting of two twisted pairs plus a shield to carry data. The cable must be specifically impedance matched for the digital DMX signal, meaning that microphone cable or other non-rated cable **must not be used to carry DMX**. Network cable (Cat5, 5e or 6 cable) may be used to carry DMX in an installation; however special consideration must be given to shielding and termination. Under no circumstances should solid core cable like Cat5 be terminated into a screw down connector.

Meteor recommends the use of Belden 9729 or Belden 9841 for DMX installation. Belden 9729/9841 is a two pair cable, which allows for a spare pair for 'out and back' type terminations if needed.
